MOBILE INVENTORY MANAGER

*It's not just about doing your job
it's what happens when your job doesn't go smoothly.*

Mobile Inventory Manager (MIM) puts the power of your evidence system in your hands. A regular inventory of your evidence facility is critical. MIM makes this task simple by using a smart device to **bring your evidence system to the evidence.**
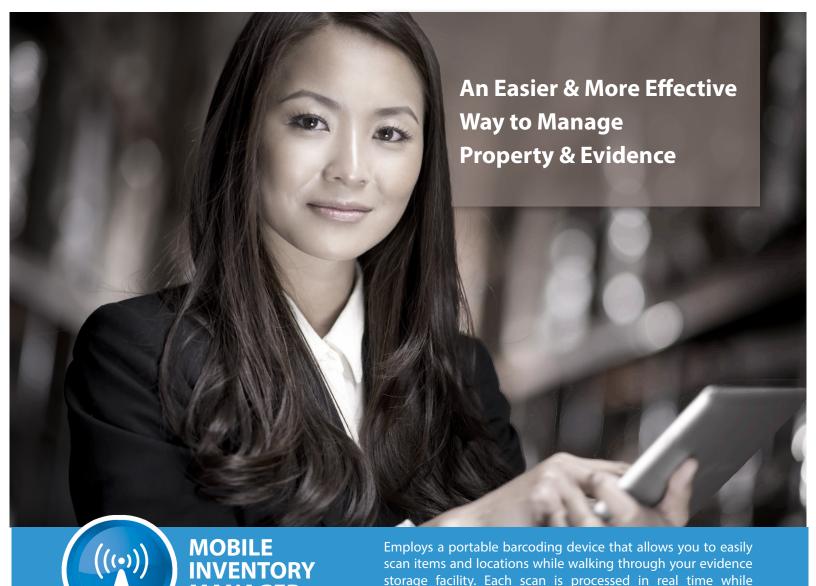

Using MIM to scan every item makes the job go quicker. **On the spot,** you will know when something is in the wrong place. Where does your search begin when something is in the wrong place? The answer is already in your hand. MIM gives you the who and where within the chain of custody for every item you need to locate.

Since the application is always connected to your data, other **problems** such as an invalid move **are noticed immediately**. MIM implements the ACE List Feature, allowing you to create and save item lists from the warehouse and open them immediately for action in the ACE desktop application.

Conducting an inventory of some locations can take a long time. **Easy to follow screen** prompts show you all the items that should exist in your location, with indicators for those items you have already scanned. This allows you to know at a glance how much of the inventory you have accomplished. MIM helps you split the task amongst your team and divide it up over time. You can save the inventory if you get called away for another task. When the next technician scans a location, they will be able to **pick up the inventory exactly where the last technician left off.**

Missing items will be immediately apparent without waiting to synchronize with a desktop computer. **To correct the problem just move them with MIM.**

Inventory for B SHLF

Inventory	Location	NCIC	Status	Description
11 items				
330003737 1	-B SHLF-	W	unscanned	9MM GLOCK
330003737 2	-B SHLF-	Y	unscanned	SYRINGE

MOBILE INVENTORY MANAGER

Employs a portable barcoding device that allows you to easily scan items and locations while walking through your evidence storage facility. Each scan is processed in real time while recording all item movement and adding to the chain of custody.

- Small bluetooth barcode scanner scans items quickly and efficiently

- Keep your property officers constantly connected to property and evidence data

- All transactions occur in real time; no more synchronizing with a host computer outside the property area

- Error notifications inform technicians of invalid item locations immediately

- Available on all mobile platforms (Android, IOS, or Windows 8.1)

- Stored inventory information enables one officer to begin an inventory, and another officer to finish

- When an item is missing from a location, MIM lets you know who was responsible for the last action and where it was last seen

- Inventory progress shows the technician how many items are left to scan, making missing items easy to detect

- Can accommodate a large number of devices, reducing hardware costs if you already have smart devices available. (Bluetooth required for the barcode scanner)

- All information views are customizable with filters and sorting

Real-time access to records where and when you need it.
